ENFLIGHT SHOWCASES ADVANCED, WEB-BASED FLIGHT PLANNING TOOLS AT EAA'S AIRVENTURE

*Introducing **Enflight Maps**:™ Plan on Sectionals, En-route Charts, and Satellite Imagery*

Free 30-day Trial Offer for Pilots

OSHKOSH, WISCONSIN, July 23, 2008 — Enflight is demonstrating a major upgrade to our full range of advanced, web-based flight planning tools at this year's EAA AirVenture aviation celebration. Enflight's industry-leading services get pilots into the air faster and easier with clear, concise, and customizable pre-flight weather, planning, and briefings.

“Enflight Maps applies our focus on planning through personal minimums to graphical weather depiction on sectionals or enroute charts. Our advanced tools help pilots plan their flights faster and more easily, greatly increasing safety” says Enflight President Phill Apley. “Our easy-to-use services are available both online or on-the-go using a smart phone or PDA. These are features that can only be found with Enflight. We're also offering pilots the opportunity to use our services free for 30 days.”

Pilots are invited to see Enflight demonstrate its products and features each day at EAA AirVenture July 23 -29 at Booth #3148, Hangar C. Eligible pilots can also register for the free 30-day trial offer.

Our demonstrations will include:

- **Enflight Maps** — View your flight plan and custom weather on a sectional or en-route chart. Print the part of the map you need for your flight. Fly your flight plan in Google Earth™ with terrain and actual weather displayed. Familiarize yourself with your route of flight and destination airport before you get in the plane.
- **Fuel Stop** — View relative fuel prices in Enflight Maps to pick fuel stops.
- **Enflight Mobile** — Briefing, route planning, flight plans, and airport information on your smart phone or PDA.
- **W x p e r t** — Safely make Go/No Go decisions at a glance. Weather shown in red is below your personal minimums, while green shows you're good to go.
- **N x p e r t** — Quickly see NOTAMS applicable to your flight.
- **Selective Briefing** — Identify and print only what you need.

Enflight's flight planning system is the most widely used route planner in general aviation, for pilots of aircraft ranging from single-engine piston aircraft to transport jets. The system is designed to get a flight into the air rapidly, using advanced technology including highly optimized automatic route selection, simple aircraft performance profiles, and modeling the effect of airborne winds on flight performance — all in a pilot-friendly flight log format.

Altitude-sensitive aircraft profiles and automatic searching of FAA preferred and coded routes are key features of Enflight's Flight Planner, available only on enflight.com. Enflight technology has been the technical backbone of the CSC DUATS system since 1991.

Now headquartered at the Minuteman Air Field in Stow, MA, Enflight offers pilots an exclusive suite of flight planning products and tools that enable pilots to plan flights faster, easier, and more safely. We offer industry-leading web-based products and features that provide FAA legal briefings with no software to download or install. At Oshkosh, come see us and give us a try at Booth 3148, Hangar C, and at www.enflight.com.
